

BlackBaron II

zipped edge blackout roller blind system

Overview

- Zipped-edge fabric retention
- 12 year warranty
- Sizes up to 4m wide, 6m drop, 24m²
- Includes headbox and slim side channels

System Detail

BlackBaron II features extruded aluminium headbox and slim side channels. The blind fabric is locked into the side channels using zip-edge technology. The aluminium profiles are powder coated in white or black as standard, or any other RAL colour to order.

Headboxes are either 100mm or 125mm high, depending on blind size. The slim side channels are only 35mm wide. A wider 56mm side channel is also available. We can also offer an ultra-slim 24mm wide channel for motorised BlackBaron II only. Sturdy steel legs connect the headbox and side channels to create a rigid frame. Universal profiles allow the frame to be fixed through the face, sides or top as required and all fixings are completely concealed.

BlackBaron II blinds can be operated manually via chain, crank handle, or motorised with many control options available. Motors with obstacle detection are also available for added safety.

Uses & Applications

Zipped-edge fabric retention is what sets BlackBaron II apart. This removes the challenge, and associated maintenance issues, of fabric coming out of the side channels on traditional blackout and cassetted blinds.

The fabric being fully retained down both sides also allows for blinds to be installed at up to 30° off the vertical and still function perfectly; an ideal solution for sloping glazing. The headbox and side channels can also be recessed into walls or ceilings for the ultimate built-in look.

BlackBaron II blinds are simple and fast to install and are robustly built to provide a maintenance-free blind. With all fixings concealed and slim side channels securely guiding the fabric, any roller blind can be enhanced by BlackBaron II. It's not only for blackout; a wide range of fabrics can be used with this system.

BlackBaron II can be motorised or operated manually via chain or crank handle. With the ability to cover an incredible 24m² in a single blind, BlackBaron II is an outstanding performer for your shading or room darkening requirements.

Fabric Options

BlackBaron II can be used with a substantial range of fabrics to create the optimum level shading or blackout. The Spectrum range of durable flame retardant roller blind fabrics has something suitable for most requirements. The fabrics from the Spectrum range which are recommended for use with BlackBaon II are:

- **Meridian**

A basketweave screen fabric in a range of neutral colours, with a white backing that provides total light blockage. This is a good looking fabric, but it is not only what you see that that makes it special.

The host of features packed into Meridian include Greenguard certification and Microban® antimicrobial protection. It is also halogen free and flame retardant.

- **Crescent**

The range of neutral shades will blend or contrast with your interior finishes, while the tactile white backing provides light-blocking as well as uniform appearance from outside.

This fabric provides the perfect blend of form with function: room darkening and complete privacy, with an ambience you can feel.

Of course, you are not limited to using a fabric from the Spectrum range. We have access to hundreds of beautiful high performance fabrics and the list is always growing; we are keen to work with you to find the perfect one.

Still not sure what fabric is right for your project?
